## **Stress . . .**

When a human is attacked with an edged weapon, massive physiological and psychological changes take place to prepare the body to survive. These changes will dramatically affect the ability for individuals to perform skills that were easily executed when no stress is present. The Shocknife® uses electrical stimulation to fool the brain into believing the body has been cut without actually breaking the skin. If you are not currently using the Shocknife®, ask yourself. . .

## **How REAL is your edged weapon TRAINING?**

### **Edged Weapon Facts**

- 24% of all serious injuries experienced by crime victims were from edged weapon attacks (only 13% were from firearms)
- 569,990 edged weapon attacks occur in the United States each year (1,561 per day)
- Number of people routinely carrying knives in North America has increased by 92% since 1980
- Every house in North America has some type of edged weapon
- Most popular improvised weapons in prisons are designed to cut or pierce

### **Your Edged Weapon Training**

Is your training knife capable of inducing the necessary fear and stress required for realistic training? If not, you are not adequately preparing your people to survive edged weapon attacks. When it comes to training, your people deserve the best and most advanced training tools in the world. For edged weapons training, that tool is the Shocknife® SK-2.

# The Shocknife SK-2

The Shocknife® SK-2 (patented) is an ingenious balance between safety and performance. The composite blade is incapable of cutting. It delivers a localized shock that causes pain, but not serious injury or incapacitation. The SK-2 has four voltage settings. At its highest setting the SK-2 delivers up to 7,500 volts and less than 1 milliamp. The Shock Activator Switch allows the user to control when the shock is delivered.

## SENSORY STIMULATION

When activated the blade assaults your senses by producing sparks in a menacing fashion.

## PROTECTIVE HILT

The soft rubber hilt protects the user from shock and injury.

## NEW AIR CAVITY

The Air Cavity prevents the blade from shorting due to excessive sweat.

## NEW IMPROVED ELECTRONICS

Enhanced electronics with reverse polarity protection.

## SHOCK ACTIVATOR

Easily accessible button allows for various gripping styles. It ensures shock is only delivered when required.

## BATTERY COMPARTMENT

The SK-2 uses a standard 9 volt battery with easy access for quick replacement.

## SHOCK ADJUSTMENT SCREW (SAS)

SAS allows for four settings. Low, Medium, High, and Extreme. The SAS is recessed into the handle to prevent accidental adjustment.

## HANDLE COATING

No-slip Super-grip coated handle avoids slippage during intense training sessions.

Each Shocknife SK-2 comes complete with protective carrying case and accessories, full 1-year warranty and free access to online Shocknife Safety Monitor Certification course.

# ***The SHOCKNIFE® Advantage***

## **ADVANTAGE #1 –**

### ***Biofeedback Tool***

Set the adjustable SK-2 shock level to LOW and the blade of the knife becomes your instructor. It uses a mild painless shock to provide feedback when your technique needs correction. Save time, energy, and money by training more efficiently.

## **ADVANTAGE #2 –**

### ***Stress Exposure Training***

A real knife attack creates a feeling of panic causing your body to respond with the “fight or flight” syndrome. That same acute stress can now be replicated during training by setting the SK-2 shock level to EXTREME. At this level the knife sparks and growls, ready to bite with each attack.

## **ADVANTAGE #3 –**

### ***Cut Location Indicator***

The SK-2 delivers a powerful shock upon contact allowing the trainee to recognize both WHERE and WHEN they were exposed during the attack. The shock will even arc through clothing! Unlike marking knives there is no messy marking compound to clean up after training.

## **ADVANTAGE #4 –**

### ***Stress Inoculation Tool***

True Stress Inoculation Training involves an incremental exposure to a stressor. The SK-2's four different shock level settings range from LOW to EXTREME, making it the only training tool in the world that can truly claim the ability to provide incremental stress training. The varied settings allow everyone that trains with the SK-2 to advance at their own pace.

## **ADVANTAGE #5 –**

### ***Realistic Research***

For the first time ever, the SK-2's ability to create fear responses will allow researchers the opportunity to simulate and study realistic edged weapon attacks. Are you or your instructors still teaching the 21 foot rule? Try replicating the study using the SK-2, the results will truly SHOCK you!

**ADVANTAGE #6 –**

# **Reduced Liability**

Are you using the training knife that will best prepare your officers or soldiers to survive an edged weapon attack? The average settlement for failure to provide adequate training is \$1.2 million dollars. The SK-2 is the only training knife in the world that can replicate the same mental and physical responses necessary for realistic training.

\*Online Safety Monitor Certification is available for agencies conducting training with the SK-2.

## **Training Knife Comparison**

- Looks like a real knife
- No messy clean up required
- Locates where you've been "cut"
- Tells you when you've been "cut"
- Feels like you've been "cut"
- Can be used as a biofeedback tool
- Is adjustable for Stress inoculation
- CAN INDUCE FEAR!**
